SUMMARY

Informatics student graduating in 2027. I build web apps end to end with React and Laravel, from the database schema to the UI. During my internship I built an internal sales and project-monitoring system with separate dashboards for five user roles.

EXPERIENCE

PT Amsar Prima Mandiri — Web Developer Intern Mar 2026 – Jul 2026

React, Laravel 11, Laravel Sanctum, MySQL, Zustand, Recharts

- Built an internal web app that moved sales, site-visit and project records out of manual recaps into one system, with separate dashboards for admin, sales, sales manager, site manager and engineer.
- Designed the MySQL schema (32 migrations) and REST API (25 controllers) for the sales funnel from lead to won/lost, visit planning with check-in/check-out, and engineer progress reports.
- Added a manager approval flow for unplanned visits, sales KPI charts with Recharts, and PDF report export with jsPDF, so managers no longer had to compile reports by hand.
- Set up token auth with Laravel Sanctum, rate limiting on login and password-reset endpoints, and password reset by email.

PROJECTS

Motorcycle Service Reminder (PWA) React, TypeScript, Vercel Functions, Gemini API

- Built an installable app that tracks odometer and service history per component and predicts the next service date from average km per day, with daily push reminders sent by a Vercel cron job.
- Integrated Gemini to turn photos of workshop receipts into line items and to answer part questions with cited web sources, using a model fallback chain, timeouts and per-device rate limits; covered the core logic with 180 Vitest tests.

QR Code Menu & Table Ordering React, Node.js, Express, MySQL

- Built a QR menu and ordering app that a restaurant now uses instead of printed menus: customers scan the code on their table, order in the browser and pay via QRIS, with no app to install.
- Built the admin dashboard with JWT login, menu and photo management, new-order sound alerts, and daily and monthly sales charts.

Campus Library System PHP 8, MySQL, PDO

- Built a library website for members and circulation staff: catalog search by title, author, ISBN and call number, DDC class filters, self-service renewals, and automatic late fines.
- Used a database transaction with SELECT ... FOR UPDATE so two staff members can't lend the last copy at the same time, and protected every form with CSRF tokens and PDO prepared statements.

GestureSense — Sign Language Recognition Python, TensorFlow/Keras, OpenCV

- Trained a hand-gesture classifier in Keras on a sign-language image dataset, with an OpenCV/NumPy pipeline for preprocessing and augmentation.
- Built a prototype that classifies gestures live from a webcam, as a first step toward a communication aid for deaf users.

EDUCATION

Universitas Pamulang — Bachelor of Informatics Engineering Expected 2027

SKILLS

Languages	JavaScript, TypeScript, PHP, Go, Python, SQL, Java
Frontend	React, React Router, Zustand, Tailwind CSS, Recharts, Chart.js
Backend	Laravel 11, Laravel Sanctum, Node.js, Express, REST APIs, MySQL
ML	TensorFlow/Keras, OpenCV, NumPy, Pandas
Tools	Git, GitHub, Vercel, Vitest, Laragon, Jupyter
