

Oktariza Gunawan

Full-Stack Developer | Web Applications & Machine Learning

oktarizagunawan63@gmail.com | github.com/oktarizagunawan63 | linkedin.com/in/oktarizagunawan

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building fast, well-structured, and production-ready web applications. Skilled in developing responsive interfaces with React, integrating frontend with Laravel or Go backends, and managing data workflows using MySQL. Passionate about clean UI design, application performance, and applying machine learning to solve real-world problems.

TECHNICAL SKILLS

Frontend	React, React Router, Tailwind CSS, JavaScript, HTML5, CSS3
Backend	Laravel, PHP, Go, REST API, MySQL
ML / AI	Python, TensorFlow, Keras, OpenCV, NumPy, Pandas
Tools	Git, Laragon, Netlify, Jupyter Notebook

PROJECT EXPERIENCE

PT Amsar Prima Mandiri — Project Monitoring Dashboard | React · Laravel · MySQL · Laragon

- Designed and built an internal dashboard enabling the company's team to monitor project progress, work status, and operational data from a single centralized platform.
- Developed a fully responsive React frontend and integrated it with a Laravel backend and MySQL database via REST API.
- Structured a modular and scalable application architecture covering admin management, project reporting, and extensible monitoring features.

QR Code Menu Restaurant | React · Laravel · MySQL · REST API

- Built a QR code-based digital menu system allowing restaurant customers to browse the menu directly from their mobile devices without downloading an app.
- Implemented dynamic menu management, item categorization, real-time search, and an admin dashboard to streamline menu updates.

Blood Pressure Monitoring System | React · Go · MySQL · Chart.js

- Developed a blood pressure monitoring app featuring daily logging, measurement history, and periodic health trend visualization for end users.
- Integrated Chart.js to present blood pressure data as interactive graphs, making health trends easy to interpret for non-technical users.

Futsal Booking System | PHP · MySQL · JavaScript

- Designed a futsal court reservation system with real-time slot availability checking, booking history, and an admin panel for court management.
- Streamlined the booking flow to reduce manual coordination, making it faster for users to view and secure available time slots.

GestureSense — Sign Language Recognition | Python · TensorFlow · OpenCV

- Built a real-time hand sign language recognition prototype using computer vision, as an early step toward developing an inclusive communication tool powered by machine learning.
- Handled image preprocessing, gesture classification model training, and inference optimization to achieve responsive recognition under real-time conditions.

EDUCATION

Universitas Pamulang | Bachelor's in Informatics Engineering (5th Semester, Expected 2027)

Concentrating on web development, backend APIs, database management, data science, and machine learning. Consistently building independent projects to sharpen problem-solving skills and deliver end-to-end solutions in practice.
